SUMMARY

As a Computer Science student specializing in Artificial Intelligence and Machine Learning, I am passionate about leveraging data-driven approaches and intelligent systems to solve real-world problems. My interests lie in exploring machine learning algorithms, deep learning, and data science to build innovative and efficient solutions. I am dedicated to enhancing my skills in developing predictive models, optimizing decision-making processes, and applying AI to diverse domains such as healthcare, automation, and smart technologies. By staying updated with emerging tools and technologies, I strive to create impactful projects that combine technical innovation with practical application. My commitment to continuous learning drives me to contribute meaningfully to the growing field of AI and ML.

EDUCATION

Bachelors of Engineering – Computer science (AIML) and Engineering **2023-Present**
Mangalore Institute of Technology & Engineering. (Autonomous) CGPA: 8.56

Senior Secondary (12th) **2021-2022**
Kendriya Vidyalaya NAL Campus , Bengaluru . Percentage: 69 %

Secondary School (Class X) **2019-2020**
Kendriya Vidyalaya NAL Campus , Bengaluru . Percentage: 82 %

TECHNICAL SKILLS

Languages: Java , C , Python.
Interface: HTML, CSS , React .
Database: SQL, MySQL
Tools: Jupyter, Visual Studio Code, MySQL, Figma, Code Block, GitHub
Office Suites: MS Excel, MS Power Point, MS Word.

INTERNSHIP

Internpe | Python programming Intern
Project Title: Python Mini Projects – Clock, Tic Tac Toe, and More

- Built interactive applications such as a **Digital Clock** and **Tic Tac Toe game** using Python.
- Applied core programming concepts like functions, loops, conditionals, and object-oriented principles.
- Enhanced problem-solving skills by implementing logic-based solutions in real-time projects.
- Gained hands-on experience in debugging, code optimization, and project structuring.

PROJECTS

E-Commerce Website (UI/UX + Frontend)
Designed and built a responsive e-commerce website using HTML, CSS, and React. The platform included essential features such as product catalog, shopping cart, and user authentication. Prototyping and UI/UX design were first carried out in Figma, then implemented into functional code. Special focus was given to creating mobile-friendly layouts with clean navigation to enhance user experience.

Mini Python Projects
Created multiple Python-based applications including a Digital Clock and a Tic Tac Toe game. These projects allowed practical application of loops, conditionals, and object-oriented programming concepts. Tkinter was used to build interactive interfaces, while debugging and testing improved logical thinking and coding efficiency.

COURSES & WORKSHOPS

- Certification for participating in NXTWAVE workshop on "**AI For students : Build Your Own Generative AI Model**" .
- Certification by Infosys Springboard for "**Learning Python**".
- Certificate of completion "**Artificial Intelligence for All**" by global expert faculty Dr. Rao Vemuri .
- Certification of participation in "**SAP HACKFEST"** in 2023 and 2024 .
- Certification of course in "**GenAI Powered Data Analytics Job Simulation**" by Tata.
- Certification of course in "**Data Visualisation: Empowering Business with Effective Insights**" by Tata .

ACHIEVEMENTS & ACTIVITIES

- Participated in various IT & Non-IT related competitions and secured prize.
- Participated in "**TEDX_MITE**", held at MITE, Moodbidre , 2023.
- Participated in **"SAP HACKFEST"** in 2023 and 2024 .
